

A reminder: IPIECA & the OSWG: Vision and Goals

International Petroleum Industry Environmental Conservation Association (IPIECA)

- To develop and promote scientifically sound, cost effective, practical, socially and economically acceptable solutions to global environmental issues pertaining to the oil industry
- To be [the industry] primary point of contact with the UN on environmental issues

Oil Spill Working Group (OSWG)

- Enhance the state of preparedness and response to marine oil spill incidents in priority locations around the world
- Promote NEBA, Tiered response, ratification of conventions
- Facilitate cooperation between industry and government at National, Regional, & International levels (Global Initiative)

IPIECA OSWG Members

International Oil Companies

International Technical Partners

CHANGING TIMES

- Require IPIECA to address new global issues
- Need to challenge to existing Working Groups roles and remits
- Validity check
 - Are we addressing members needs?

OSWG GENERAL CONSIDERATIONS

- Global Initiative program echoes the IPIECA mission
 - OSWG needs to retain its strategic role as '<u>relationship</u> manager' with the UN/IMO
- Irrespective of sourcing technical content, publications are best administered by IPIECA to build on existing credibility of IPIECA report series and NGO status
- The Global Alliance's Industry Technical Advisory Committee (ITAC) has a essential role in preparing and advising on technical content of IPIECA programs and publications

Conclusions Reached for OSWG

3. Regional Solutions & Global Initiative

- Initiatives must be relevant to regional areas where the individual members are active and be risk based while still considering broader industry interests
- Regional model should be extended with care
- The GI program must be retained and strengthened
- The GI Steering Committee must remain under the umbrella of OSWG for credibility with IMO

4. Establish Synergies with ITAC

- Common delivery of Education & Communications program
- GI support
- Ensure smooth work flow from strategic to operational level

OSWG Operational Strategy

OSWG Operational Philosophy

 The OSWG should be retained as a Working Group refocused with support from The Global Alliance

OSWG Mandate

- The OSWG should focus on the core IPIECA mandate espoused in the IPIECA mission: to be the industry focal point on environmental issues at the UN. In our case Oil Spill Response issues and IMO relationship
- Continuing with the communication and education program
- Sponsorship of conferences, training workshops
- In collaboration with the ITAC to produce world-class technical reports
- Providing strategic leadership to the Global Initiative

Oil Spill Working Group Key Objectives

- Promote ratification of relevant international Conventions
- Encourage the 'Tiered Response' concept
- Promote science based risk analyses and response options (Net Environmental Benefit Analysis)
- Participate in the 'Global Initiative' with
 - International Maritime Organization (IMO)
 - Government and industry at national and regional level
 - Shipping and other industries

Ratification of International Conventions

National Plan = Preparedness

OPRC + International Cooperation

"92 CLC & FUND + Compensation

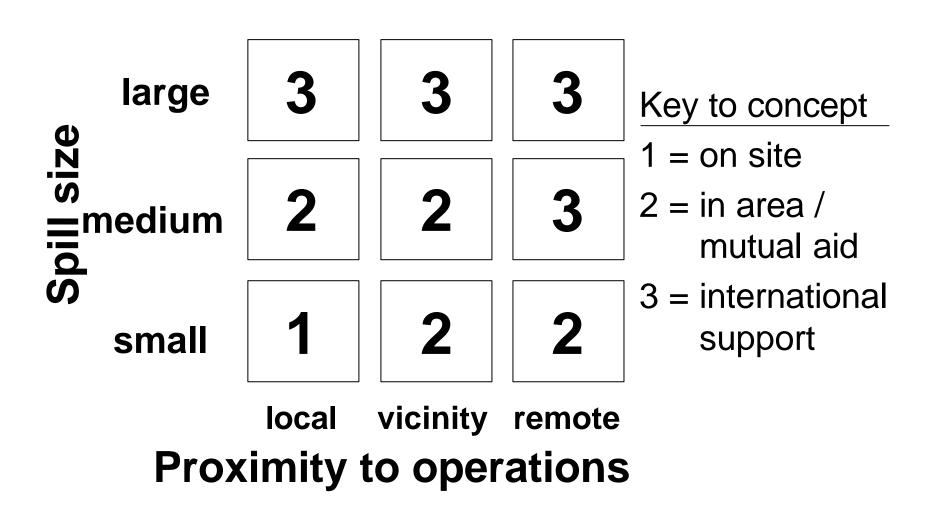

MARPOL + Less Operational Oil Spills

IPIECA

Tiered Response Concept

Having response capability in place or identified in relation to the spill risk

Net Environmental Benefit Analysis (NEBA)

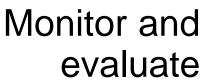

- Examines the overall environmental implications of response strategy options
- Requires an understanding of:
 - threatened / sensitive resources
 - viability of each strategy option
- Strategies may change throughout an incident
- Should be addressed during contingency planning

NEBA Requires <u>All</u> Response Options to be Available for Use

Dispersants

Protection

Containment and Recovery

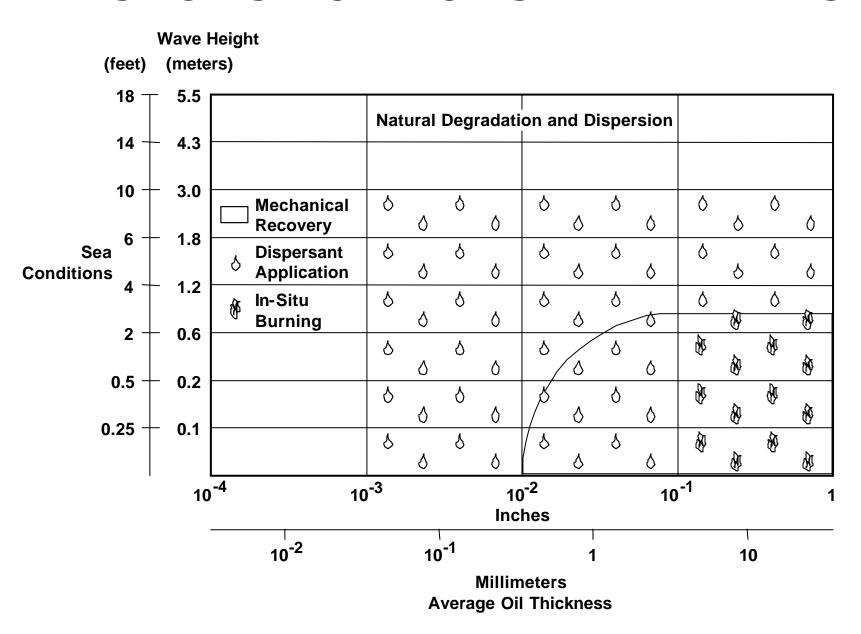

In-situ Burning

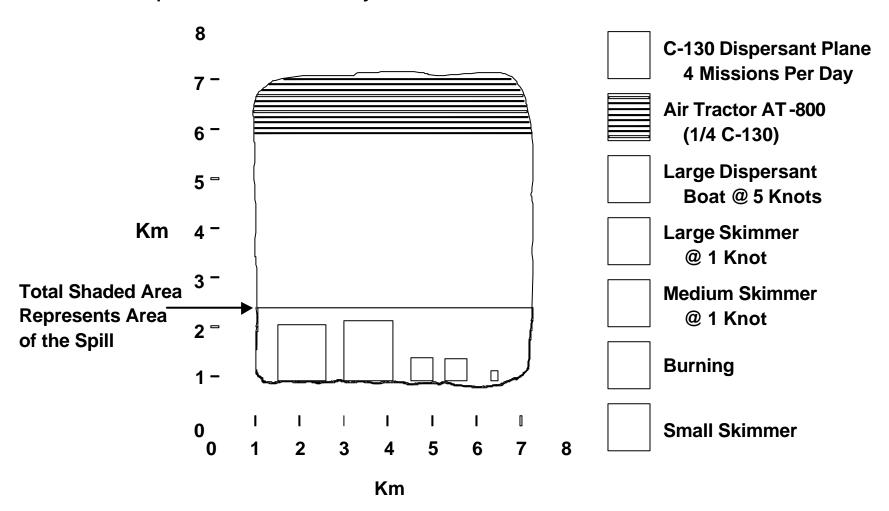

RESPONSE OPTIONS HAVE LIMITS

2 DAY COVERAGE RATES FOR SPILL RESPONSE SYSTEMS

Basis: 10,000 Tonne Spill; 0.2 mm Thick; 20% Evaporation; 8 Hrs Operation Each Day; 30 Miles Transit

IMO / Industry Global Initiative

Objective

Enhance oil spill preparedness & response capacity through industry support at the national and regional level.

Global Initiative

- Ensure cooperation between government and industry through sharing of expertise
- Initiate and catalyse activities that will lead to sustainable contingency planning
- Ensure international support can be made available using existing networks
- Identify focal points for national government & local industry
- Assist where appropriate, development of project proposals for donor funding

Global Initiative Activities

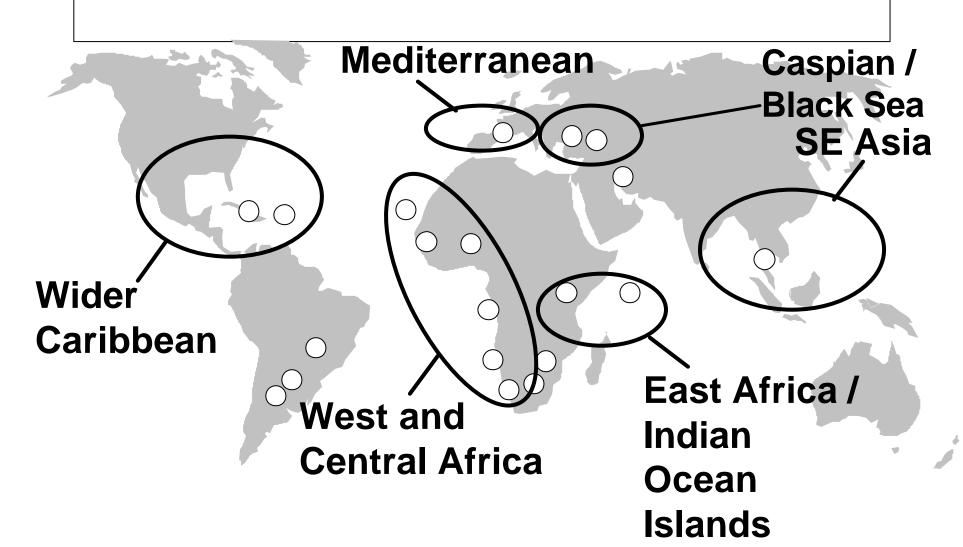

- Communications
 - consistent message through Report Series, video, briefing papers and GI Newsletter
- Technical Missions
 - progress towards Convention ratification and approval of National Plans
- Technical workshops
 - Sensitivity mapping workshops
- IMO model training courses
- Conferences, workshops & seminars
 - facilitation and presentations

Global Initiative Locations

The Planning Process

- Co-operation involving government, industry and all others who share the risk and responsibilities:
 - assessment of the risk and potential economic, social & ecological impacts
 - development of credible response strategies
 - clear definition & allocation of responsibilities
 - commitment to exercise, maintain and update (sustainability)

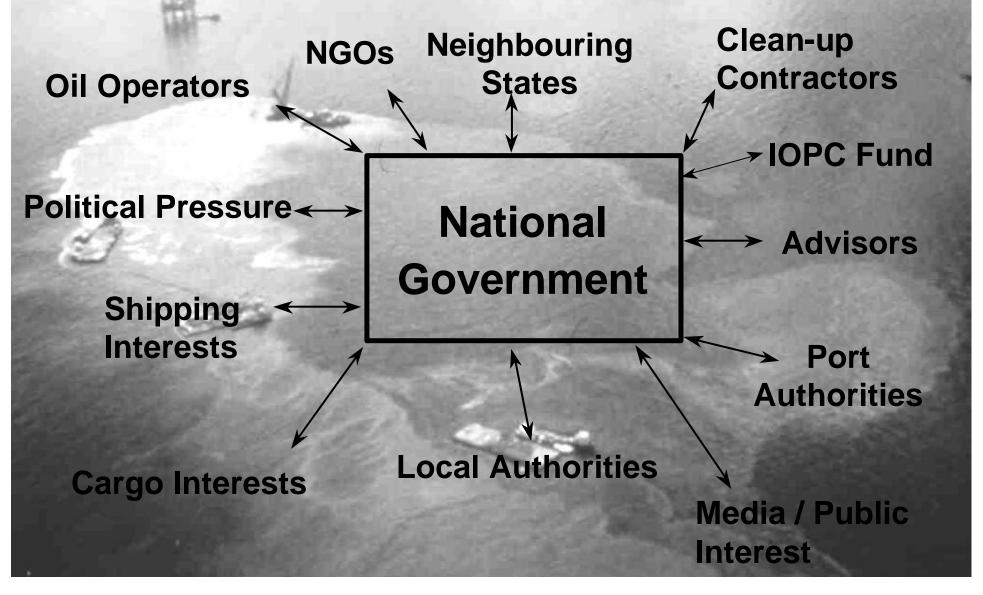

Major Incidents Need to Work Together

National Government

Major Incidents Need to Work Together

Education and Communication

- IPIECA Oil Spill Report Series and some jointly with IMO and ITOPF
- Working Together video
- Conference participation and sponsorship
- Briefing papers for members
- Newsletters
- Web site: www.ipieca.org

IPIECA Publications

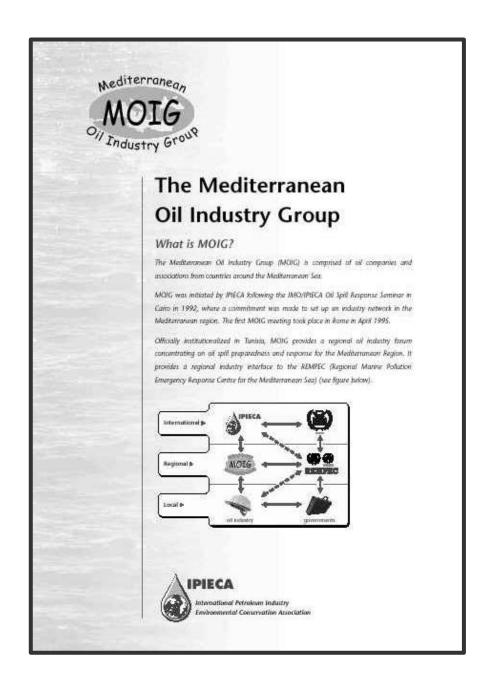

Translations underway for French Spanish Russian Japanese

Second Edition 2000

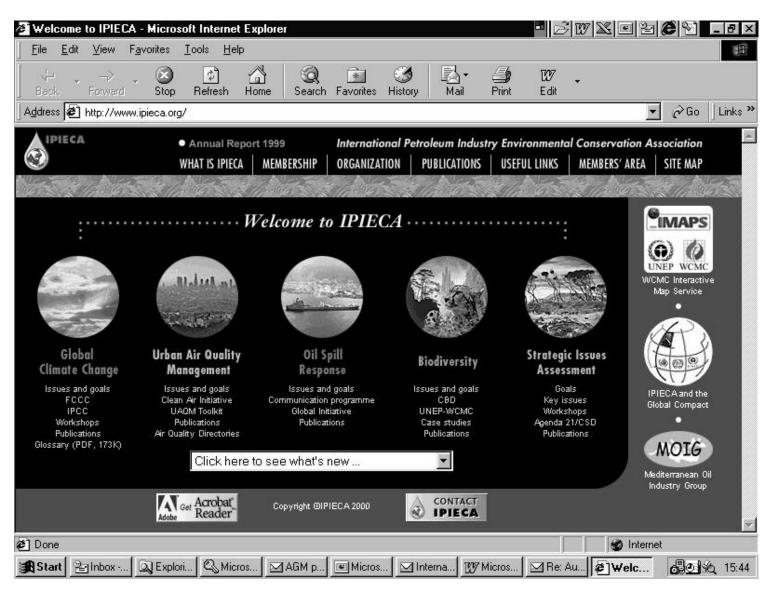

22

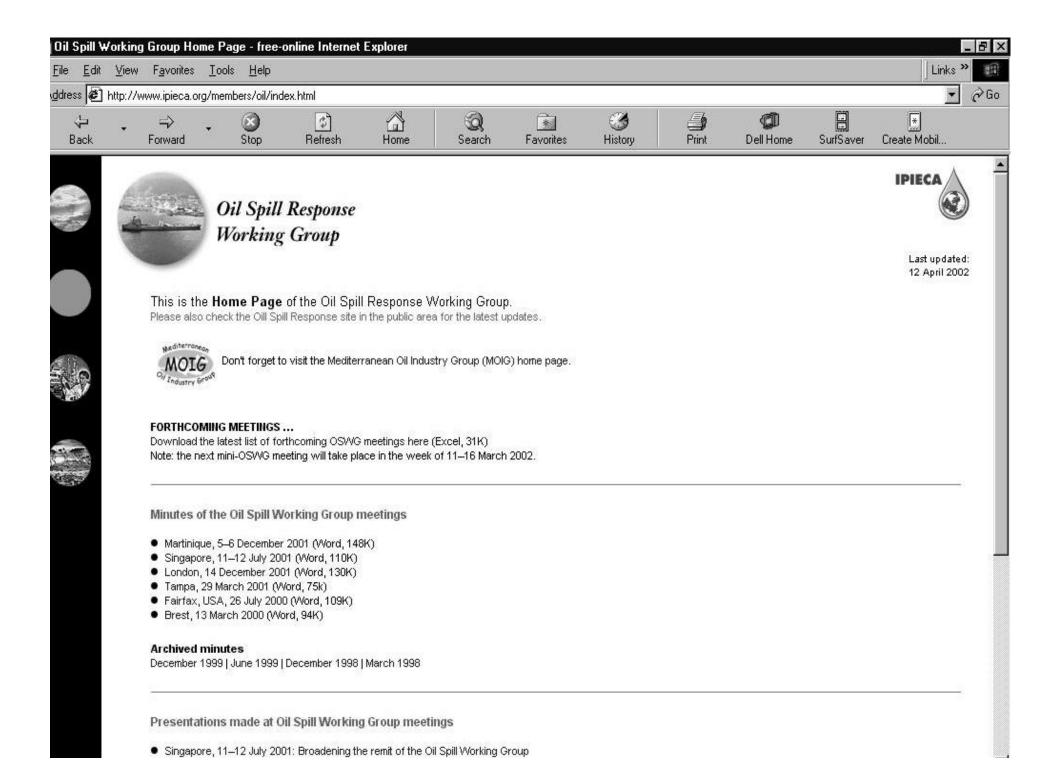

Newsletters, Website and Briefing Paper produced

Continued Challenges for OSWG

- Response to major incidents demonstrate continued need for education
 - Tiered OSR resources not always used or delayed in call out
 - Many countries have still not ratified conventions
 - Ratification of OPRC is only a piece of paper in many countries
 - NEBA for response and mitigation to spills is still not being used
 - Need further education on science before the incidents
 - Need to move from debate to action steps by governments
