

1. Desmi Crane Sweep System (Ro-Clean Desmi A/S, Denmark)

Crane Sweep System (TransferPump)

This System allows the Desmi DOP-250 to be easily repositioned and forced or swept through the heavy oil layers - effectively force feeding the pump. The hydraulic cylinder the end of the knuckle crane allows the orientation of the pump to be adjusted, the pump along with the hoses can be lifted clear of the oil without manual assistance.

2. Power Vac (Vikoma International Ltd. UK)

Power Vac (Beach Cleaner)

It is a self contained, simple to use, one man operated oil recovery system and is a trolley mounted unit to recover oil to a standard 45 gallon barrel or optional hopper. It is designed for the removal of oiled sands, muds and debris up to a rate of 30 tonnes per hour. The high-pressure water jet can use salt or freshwater.
